About the project:

The project is created as a request from one of Tampere University of Applied Sciences' clubs, TASO RY. Since the club's old website cannot be accessed, the new page has to be developed in order to introduce the club to other students.

Requirements for the page:

TASO RY wants the page to have these features available:

- Responsive view: suitable for both phone, tablets and large screen device users.
- There should be a blog page for admin to create new posts and publish them to the page. Our team has created the frontend part for the blog page, we are working on the backend for the page.
- An Instagram widget: display Instagram posts and be able to redirect to TASO RY Instagram.
- Feedback form.
- Light and easy to use.

Tasks

My tasks during the project:

- Make a design for the web page, using Figma. Link to design: <https://www.figma.com/file/iNqHnxf8BxssimNp4gDKxp/TASO?node-id=0%3A1>. The final web page could be different from the design; our team try our best to make it as similar as possible. Some features might have not been added to the page, these features will be developed in late future.
- Working on the structure, pages and views of the web page (the whole structure of the webpage, 'About' view, 'Blog and Instagram' view, ...).
- Finding documents, images related to TASO RY.
- Add effects to pages, make some edits when needed.
