Name: Ayesha Siddiqua

Taso Work:

My contribution to Taso webpage is below:

I started my work with design the webpage in figma. Like as, blog, anna palautetta page, primary calendar version, tapahtumat for mobile responsive.

In the coding part, I did a Blog page. To create this page, I use React js. In the Visual Studio Code first I create a React app using this command: npx create-react-app Taso. Then I started to clean unnecessary files. And create some necessary folders and files.

This blog page is divided into multiple pages and components with a navbar, header, and footer. Per page have 8 blog cards max. It behaves as dynamic depending on data size. If you click on one card it will open the details on another page.
